

ICORCE 2022

The logo for ICORCE 2022 features the word "ICORCE" in large, bold, black capital letters. The letter "O" is replaced by a stylized orange circular frame containing a 3D architectural rendering of a modern building complex with a bridge-like structure. To the right of "ICORCE", the year "2022" is written vertically in orange.

CO-AUTHOR ;Dr.Toseef Din,CEO MPShah Hospital

TOPIC: SUSTAINABLE HEALTHCARE DESIGN, CONSTRUCTION AND BUILDING OPERATIONS

- A modern Private hospital with 210-bed capacity
- Located in Parklands Area in Nairobi

Association of Medical Engineers of Kenya

- AMEK is a professional Association registered under CAP 108 of the laws of Kenya
- An umbrella Body for all the Biomedical Engineers in Kenya.

TABLE OF CONTENTS

- Objectives
- Introduction
- Sustainable Healthcare
- Overview of Greening Healthcare
- Issues/Barriers Related to green Healthcare
- Drivers to Green Healthcare
- Recommendations to sustainable Healthcare

OBJECTIVES

- To explore issues related to sustainable healthcare building practices
- To discuss ways in which healthcare practitioners can incorporate sustainable design practices in their facility.
- To identify barriers to healthcare construction sustainability
- To determine drivers to healthcare construction sustainability
- To identify opportunities for improving the existing and upcoming health facilities

INTRODUCTION.

- Healthcare projects face multiple obstacles in achieving sustainability.
- They are among the largest consumers of energy
- contributes to greenhouse gas emissions and climate change
- They are also one of the biggest producers of waste some of which are toxic.
- Healthcare industry is contributing to the very problem it's trying to solve
- There is an urgent need for greening of healthcare industry(C19)
- To ensure health care benefits the people, society and the planet, and does not cause more pollution or health problems
- This will have great impacts on growing economic, social and environmental issues

SUSTAINABLE HEALTHCARE

- It's a safe and therapeutic environment
- Contributes to the process of healing
- Promotes health and prevention of diseases
- Design intervention contributes to improved patients outcomes
- Achieves social and environmental benefits
- Lowers negative environment impacts.
- Protect occupant health (Patient, staff and visitors)
- Improve employee productivity
- Wisely use natural resources

ENERGY CONSUMPTION IN HEALTHCARE

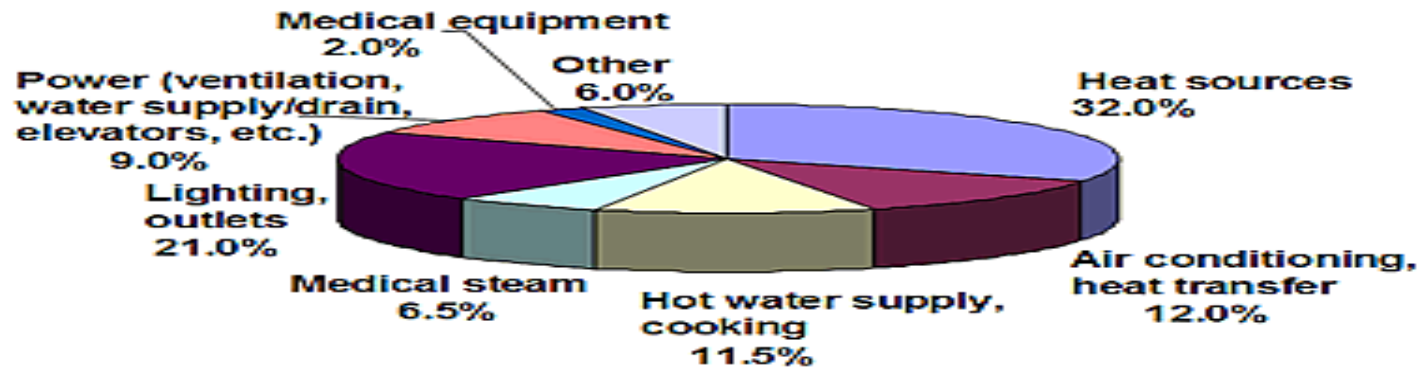

| ITEM NO. | DESCRIPTION | REMARKS |
|----------|-------------------------------------------------|---------|
| 1 | Heating, Ventilation and Air conditioning, HVAC | |
| 2 | Lighting | |
| 3 | Hot water heating | |
| 4 | Medical Equipment including plants | |
| 5 | Cooking | |

Energy Consumption In Healthcare

Energy Consumption Structure and Floor Area for Each Department in Hospitals

Hospital

Floor area by department

Energy consumption components

Types of Hospital Waste

Risk Waste

Infectious waste

Pathological waste

Sharps

Pharmaceutical waste

Genotoxic waste

Chemical waste

Radioactive waste

Non-Risk Waste

Paper and cardboard.

Packaging.

Food waste.

Aerosols. (spray)

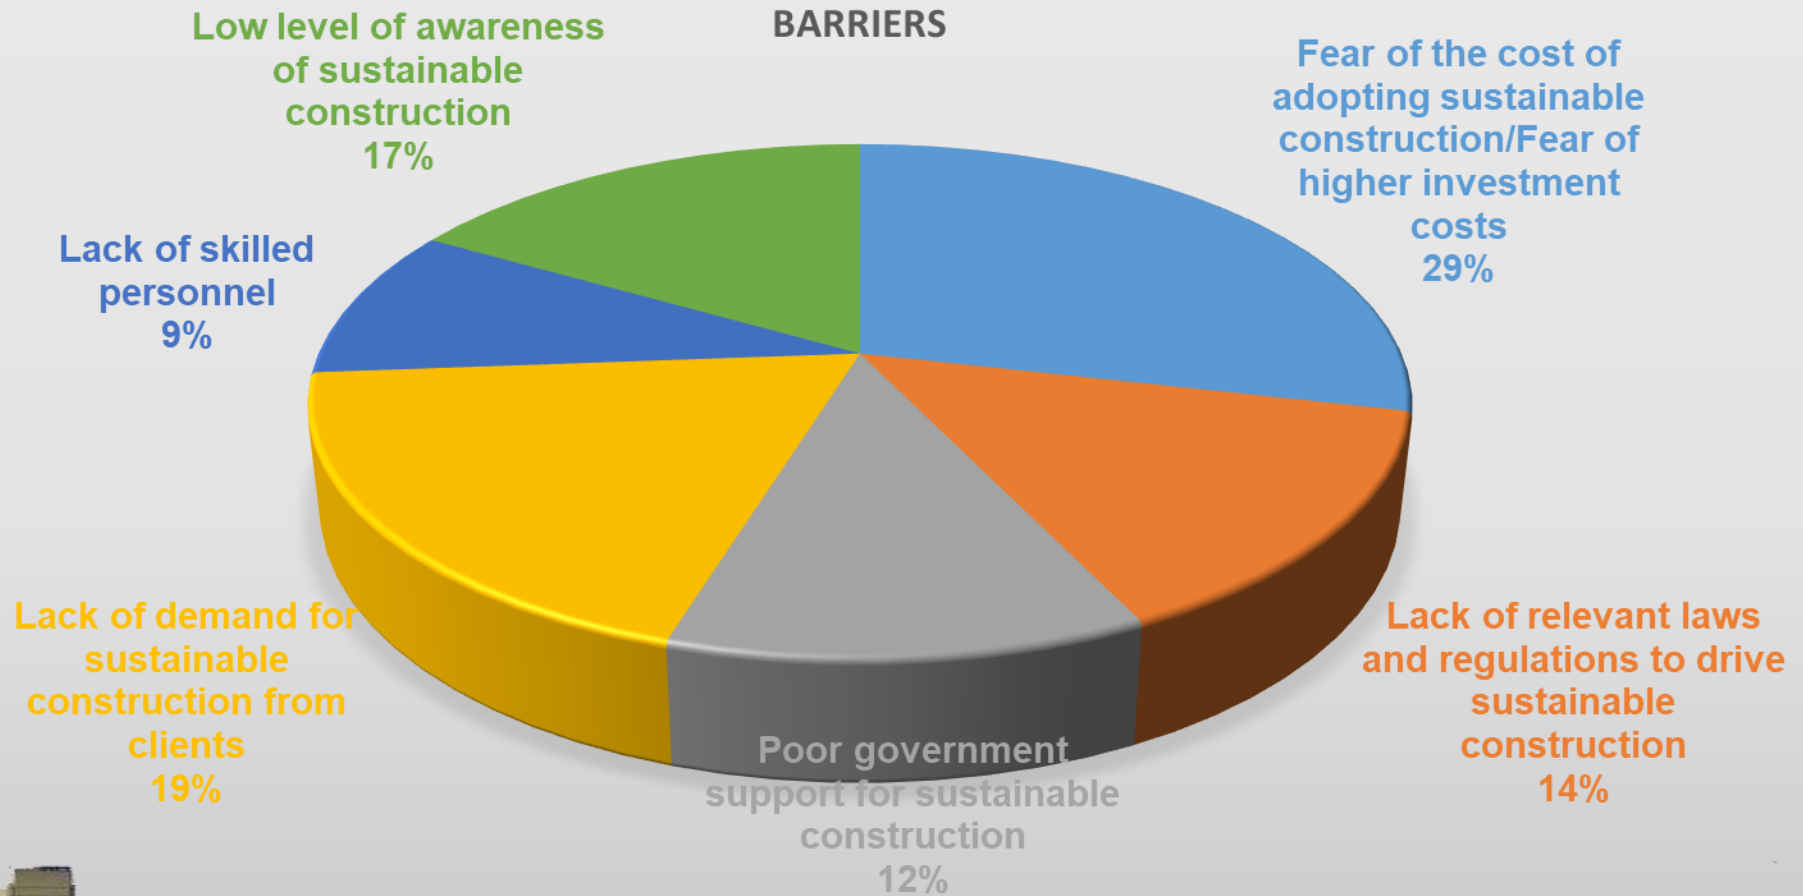

Healthcare waste

Air Quality

Issues/Barriers

| Item No. | DRIVERS |
|----------|------------------------------------------------------------|
| 1 | Energy conservation |
| 2 | Water conservation |
| 3 | Waste Reduction |
| 4 | Improving Environmental indoor air Quality |
| 5 | Medical Equipment Management –Use Intelligent Technologies |
| 6 | Medical Gas management |
| 7 | Sustainable Renovation |
| 8 | Design and construction |
| 9 | Way marking ,Signage and Navigation |

RECOMMENDATION

- *Implementation of relevant laws & regulation/Policies(Mandatory Audits)*
- *Government support for sustainable H.construction/Incentives*
- *Raise Industry awareness in both public and private functions*
- *Incentives and Rewards to both institutions and Individuals*
- *Have green mark standard specifically for healthcare supported by LEED*
- *Appropriate benchmarking for Healthcare Facilities*
- *Routine budgeting for sustainable H.construction/Renovation*
- *Demonstration of Best Practices*
- *Sustainability to form health Professional Bodies mandate*
- *Introduction at Primary education level*
